RE: City of Fort Wayne, IN
Water Works Improvements
Filtration Plant Additions
Contract 77-W-2

Gentlemen:

In our Bulletin #1, we proposed to change the condensate return system to a boiler feedwater system. The feedwater system as specified would come with an elevated receiver tank. The 4-inch gravity feed condensate return line from the south west corner of the plans has been installed at approximately elevation 743.80 and therefore the piping would be well below the feedwater tank inlet. The following specification is for a system with a low elevation receiver tank and should be used in lieu of item 5, Bulletin No. 1, the Cleaver-Brooks Model feedwater system:

SPECIFICATION:

Domestic Pump, Inc., packaged boiler feedwater system -
Style CMHD with three boiler feed pumps.
Note: Each pump to be connected to each boiler feed.

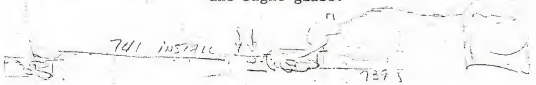
System includes:

1) 405 Gal. tank 42"Ø x 84"

2) Three low NPSH pumps - 23 gpm @ 20 psig. w/mech. seals and prepiped

3) Control panel - completely wired 460/60/1 to panel

4) Trim to include: Level control, make-up water float, valve, switch, and sight glass.



If you have any questions, please feel free to call.

Very truly yours,

McNAMEE, PORTER AND SEELEY
